

The Illinois Funds, Money Market Fund Return vs. Blended Benchmark

This graph compares the yield on The Illinois Funds, Money Market Fund's portfolio to a blended benchmark produced by the Treasurer's Office. The blended benchmark reflects the actual mix of assets in the The Illinois Funds, Money Market Fund's portfolio. For example, if The Illinois Funds, Money Market Fund invested half of its assets in repurchase agreements, one quarter in US Agency debt, and another quarter in commercial paper, this benchmark would combine standards from each of those asset classes to produce a new, blended standard. This is the most accurate indicator of The Illinois Funds, Money Market Fund's overall portfolio performance.

This graph compares the yield of the The Illinois Funds, Money Market Fund's portfolio to that of leading indicies. The Illinois Funds, Money Market Fund return is the return on the portfolio using traditional amortization methods. iMoney.net™ is the leading provider of money market mutual fund information and analysis, the benchmark index represents Institutional Government Funds. The 90-day T-Bill return is the monthly average return for the existing 90-day Treasury Bill. The S&P GIP Index is Standard & Poor's rated Government Investment Pools Government Funds Index.

The returns on all funds with investments in U.S. Treasury securities have been affected by the recent subprime mortgage fallout. Investors seeking quality and security have flocked to the bond market, driving up U.S. Treasury security prices and driving down yields further than other security types. The S&P GIP Index has very few funds with investments in U.S. Treasury securities, so it has not fallen as abruptly as the other returns shown above which do have those investments.

This graph compares the yield on the The Illinois Funds, Money Market Fund's investment in repurchase agreements to the average return of Garban-ICAP, a leading broker, as reported by Bloomberg. The ICAP represents the average rate paid by the highest rated dealers in the market.

This graph compares the yield on the The Illinois Funds, Money Market Fund's investment in commercial paper to that of DOCP (Direct Issuer Commercial Paper) rates, as reported by Bloomberg. The DOCP return represents the average rate paid by the highest rated dealers in the market.

This graph compares the yield on the The Illinois Funds, Money Market Fund's investment in money market funds to the **Money Fund Report Averages™** from iMoneyNet™, the leading provider of money market mutual fund information and analysis. Of the many indices provided by iMoneyNet™, the benchmark index represents Institutional Government Funds.

Spread - Asset Types vs. Benchmarks
The Illinois Funds, Money Market Fund
